DETAILED ACTION

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "12" has been used to designate both duct and superheater. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "30" has been used to designate both tube and tape. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference characters "20" and "26" have both been used to designate supply header. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3749

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sephton (3,648,754) in view of Palkes et al (5,924,389). Sephton discloses an evaporator including a supply header (23, 35) for receiving liquid water, a discharge header (24, 36), tubes (21) extending between and connected to the supply and discharge headers (SEE Figure 3) so that water flowing from the supply header to the discharge header can be converted to steam, helical tapes (17) extend through the tubes for inducing turbulence is helping water convert to steam in the tubes. The helical tapes have a 360 degree twist and are anchored to a bar (14) which extends transversely across the tube; the width of the tape is less than the inside diameter of the tubes. Sephton does not particularly discuss the environment in which it is operating in. Palkes teaches a steam generator (10) having a duct (12), a superheater (22), an economizer (14), and an evaporator (16) designed for once-through flow. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains to have substituted the evaporator of Sephton for the evaporator section of Palkes for the purpose of converting liquid water into steam in tubes over which hot gases flow.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory A. Wilson whose telephone number is (703) 308-1239. The examiner can normally be reached on 7 am - 4:30 pm EST.

Application/Control Number: 10/677,443
